

Region 3 GPRA Baseline RCRA Corrective Action Facility

University of Virginia

**Chemistry Building, McCormick Road
Charlottesville, VA 22901
Congressional District 5
EPA ID #: VAD000820712
Last Updated 6/26/2003**

Current Progress at the Site

The University of Virginia (UVA) is currently proceeding through the RCRA Corrective Action process in accordance with the EPA Region III Facility Lead Program. The requirements of this program include:

- A determination of the extent and sources of all releases of hazardous wastes or hazardous waste constituents at or from the Facility;
- Perform interim measures at the Facility, if warranted, to prevent or mitigate unacceptable threats to human health and the environment by: 1) controlling human exposures, and 2) controlling migration of any groundwater contamination at or from the Facility from releases of hazardous wastes or hazardous constituents; and,
- Conduct effective public involvement.

Based on the initial facility wide assessment, the "Former Observatory Hill Debris Disposal Area," (O-Hill) was the only area identified for further study. EPA approved the investigation work plan designed for this area in the Spring of 2000 and the field work was completed in September 2000. The field work included the installation of six groundwater monitoring wells, the excavation of twelve exploratory backhoe test pits, three deep trenches and the collection of samples from groundwater, surface water, soils and sediments. The goal of this investigation is to determine if this former disposal area presents any long-term risks to human health or the environment.

A final report documenting the results of the field investigation was submitted to EPA for review in October 2001. Based on the results documented in the final report EPA has concluded that there are no unacceptable risks to human health or the environment at the O-Hill area.

EPA anticipates that the proposed Final Decision document regarding the RCRA Corrective Action at UVA, (known as a Statement of Basis), will be available for public comment in the Summer of 2003.

Site Description

The University of Virginia, founded in 1819 by Thomas Jefferson, is a state-supported institution that supports research and scholarship in many fields. Its areas of strength include research in the humanities and programs in the biomedical, physical, and engineering sciences. The EPA utilized the National Corrective Action Priority System (NCAPS) model to evaluate the

relative priority of the University. The NCAPS model is based on four different exposure pathways: groundwater, surface water, air and on-site (direct contact with hazardous materials or contact with contaminated surface soils). Based upon the NCAPS model, the University ranked as a high priority facility. The NCAPS modeling results do not mean that the facility ranked as “high” will in fact, require large-scale remediation. In some cases, remediation may have already taken place under the State’s jurisdiction or as a facility-lead. The investigation at UVA focuses on the O-Hill area as was noted in the NCAPS site assessment report.

Site Responsibility

RCRA Corrective Action activities at this facility are being conducted under the direction of EPA Region 3 with assistance from the State. The investigation activities were implemented in accordance with an EPA Facility Lead Agreement.

Contaminants

Inorganic constituents in groundwater/soil and semi-volatile organic compounds in soil were evaluated as potential contaminants of concern.

Community Interaction

UVA has established and operates a document repository for this project and communicates information regarding this project to the City of Charlottesville and the County of Albemarle via a cooperative task force (Planning and Coordination Council). The repository is located in the UVA Science and Engineering Library, Clark Hall, Charlottesville, Virginia.

Government Contacts

EPA Project Manager
Mr. Russell Fish - 3WC23
U.S. Environmental Protection Agency - Region III
